SIHA SILVA AGUILAR

+55 2222561051 *sihamone20@gmail.com*

Insightful, self-motivated and skilled undergraduate with willingness, commitment and dedication to learn. Analytical thinker and creative problem solver, eager to offer superb analytical and technical skills.

EDUCATION

BSc APPLIED MATHEMATICS: UNDERGRADUATE Fall 2019- Spring 2023

INSTITUTO TECNOLÓGICO AUTÓNOMO DE MEXICO (ITAM), MEXICO CITY, 80% ACADEMIC SCHOLASHIP

Relevant modules: Applied Statistics, Linear Regression, Numerical Analysis, Linear Programming, Deep Learning.
Thesis Award: Special Mention *"Integer-Based Algorithm for the Generation of Aperiodic Penrose Tilings"*

WORK EXPERIENCE

Cloud Support Engineer II Analytics - Amazon Web Services AWS. **SPRING 2026**

- Resolved over 200+ customer issues related to AI services on AWS, including Amazon Q Business, QuickSuite, and Amazon Kendra.
- Led two AI-focused projects aimed at accelerating issue resolution for the new QuickSuite features, helping improve customer adoption and support efficiency.
- Developed expertise in AWS analytics services and their integration within customer architectures.

Cloud Support Engineer I Analytics - Amazon Web Services AWS. **SUMMER 2024 - SPRING 2026**

- Resolved over 350+ customer technical cases related to AWS Q Business, MSK Kafka, OpenSearch, Kinesis, Kendra, AppFlow, consistently achieving a 90%+ CSAT score for global enterprise clients.
- Identified critical service bugs and undocumented edge cases across multiple analytics services, collaborating with internal teams and providing effective workarounds that unblocked customer's use cases and reduced time-to-resolution.
- Troubleshooted architectures with networking infrastructures like: load balancers, firewalls, and VPNs. Architecting scalable VPCs connectivity to ensure high availability and security across environments.

Data Engineer in Bluetab an IBM Company - Tech Consulting **SUMMER 2023 - SUMMER 2024**

- Conducted continuos client meetings to identify the project insights, problems and relevant findings.
- Developed valuable data analysis for the client's data using Scala and Python to obtain relevant results ready to be presented and evaluated by the team.
- Ensured that the projects were well done tested using tools like Jenkins and Argo CD. This enhanced my ability to solve issues presented in the code and communicate them to find possible solutions to take.

Cash Equity Technology Intern in JPMorgan Chase & Co **FALL 2022 - SPRING 2023**

- Collaborated with the equities team to automatize the bank's regulatory document delivery, which improved the team's efficiency by 15% that year. We filtered the data from the app database using SQL, then performed quantitative analysis to extract relevant information and then we used Control M to automatized the delivery.

LEADERSHIP ART PROJECTS

Algorithmic creation of art tilings **SPRING 2023 - FALL 2025**

- Developed an integer-based algorithm to generate Penrose tessellations, using discrete numerical structures to construct non-periodic tiling patterns. These computational geometries became the foundation of my artistic practice in geometric art.
- Links to the projects:
  - *Kites/Darts Tiling*
  - *Rhombs Tiling*
  - *Color Orientation of Tilings*

SKILLS

Software Tools and Applications: AWS Analytics Services (AWS MSK Kafka, OpenSearch, Kinesis, Q Business, Kendra, AppFlow) Python, SQL, Advanced Excel, Matlab, Scala, Jenkins, Control M, Linux.
Languages: Advanced English and Native Spanish
Volunteer coordination - ITAM Construye: Teaching chess to middle school students (FALL 2021- SPRING 2022).
Volunteer coordination - Rubrica: Organization planner on Art Exposition - Architectural diversity
